## Séminaire ISIR

**Dr Claire Sergent**

(Laboratoire de Psychologie de la Perception, Univ. Paris Descartes)

**Vendredi 08 Février 2013 à 14h30**

Campus Jussieu, 4 place Jussieu, Paris  
Salle de réunion H20, ISIR - Pyramide

**Titre du séminaire** : Neural mechanisms of conscious perception in Humans.

**Abstract** : What neural mechanisms allow us not only to automatically process sensory information, but also to become conscious of this information? What is the role of attention in these mechanisms? I will present studies in experimental psychology, electrophysiology (EEG-MEG) and fMRI which uncover the particular neural dynamics associated with conscious perception, and clarify the role of top-down modulation by attention in these mechanisms.
